

Product Requirements Document

ClubSync – Connecting People. Preserving Legacy.

Product Overview

ClubSync is a centralized web platform designed to simplify the management and governance of college clubs, student organizations, NGOs, and community groups. It replaces scattered communication across WhatsApp, Google Drive, emails, and spreadsheets with a single platform for managing constitutions, meetings, documents, elections, tasks, and organizational knowledge. The platform ensures seamless committee transitions by preserving institutional memory and improving collaboration.

Problem Statement

Student organizations often lose valuable information when committees change. Important documents, meeting minutes, election records, and decisions are scattered across multiple platforms or stored on personal devices. This leads to poor transparency, inefficient handovers, and repeated work every academic year.

Proposed Solution

ClubSync provides a unified digital workspace that enables organizations to:

- Maintain version-controlled constitutions.
- Store and organize official documents securely.
- Schedule meetings and generate AI-powered meeting summaries.
- Conduct secure online elections.
- Manage members and assign role-based permissions.
- Track tasks and committee responsibilities.
- Search historical records using an AI-powered knowledge assistant.

Target Users

- College Technical Clubs

- Cultural Clubs
- Student Chapters (IEEE, ACM, CSI)
- Entrepreneurship Cells
- NGOs
- Student Councils
- Community Organizations

Key Features

- Constitution Version Management
- Meeting & Minutes Management
- Digital Election System
- Secure Document Repository
- Member & Role Management
- Task Assignment & Tracking
- AI-Powered Knowledge Assistant
- Notifications & Activity Timeline

Technology Stack

- **Frontend:** Next.js, React, Tailwind CSS
- **Backend:** Node.js, Express.js
- **Database:** PostgreSQL
- **Authentication:** Clerk/Auth.js
- **Storage:** Supabase Storage
- **AI:** OpenAI API (Meeting Summaries & Document Search)
- **Deployment:** Vercel + Railway/Render

Expected Outcomes

- 80% reduction in information loss during committee transitions.
- Centralized and transparent governance.
- Faster onboarding of new committee members.
- Improved collaboration and accountability.

- Digital archive of organizational knowledge for future committees.

Unique Value Proposition

Unlike Microsoft Teams or Google Workspace, which primarily focus on communication and file sharing, ClubSync is purpose-built for organizational governance. It combines constitution management, elections, meeting records, task management, and AI-powered knowledge retrieval into one integrated platform, making it a complete operating system for student clubs and communities.

Future Scope

- Mobile Application
- QR-based Attendance
- Budget & Expense Management
- Sponsorship CRM
- Public Club Website Generator
- Calendar Integration
- Speech-to-Text Meeting Transcription
